Hepatitis B can affect you

Hepatitis B can kill......
It is a dangerous liver disease.

If you show the following symptoms, you may have hepatitis B:
- Yellow skin and eyes.
- fever and fatigue.
- loss of appetite.
- nausea and vomiting.
- joint pain.
- grey-coloured bowel movements.

Anyone can get hepatitis B.
You are at greater risk if you:
- have unprotected sex with more than one partner.
- share needles as an injecting drugs.
- have had a blood transfusion and are not sure of the source.

Protect yourself from hepatitis B.

Prevent hepatitis B:
- get vaccinated against hepatitis B.
- use condoms while having sex.
- do not share toothbrushes, razors, nail clippers.
- do not shoot drugs or share needles.
- ask for blood and blood products to be screened for hepatitis B.

Get yourself tested for hepatitis B.
You may have hepatitis without showing any symptoms.

Know it. Confront it. Hepatitis affects everyone, everywhere.
